This is not a powerline.

This is thousands of American households that just got electricity delivered to their home. Or to be accurate: This is a 100 megapixel image taken by a Phase One P3 Payload. A resolution of this degree allows engineers to inspect each millimeter of the power grid from a far distance without actually having to be their themselves. The images taken can reveal bird´s nest, lightning strikes, rust/corrosion, damaged or loose bolts. Small things that can cause great havoc if they are not detected in time.

We say that we deliver imaging beyond imagination. This is what we mean.

PHASEONE

IMAGING BEYOND IMAGINATION

Phase One P3 Payload

Unmatched inspection productivity

with your preferred UAV

The P3 Payloads is a UAV payload for capturing the small details that make a big difference.

The Phase One P3 Payload is an agnostic imaging solution for all your UAV inspection needs. Choose your drone and match it with your choice of Phase One camera and lens, to get all the finest details in one shot.

Our iXM camera up to 100MP range are designed specifically for aerial imaging, making them fast, robust and easy to integrate into you UAV workflow. Our iXM cameras are compatible with a range of lenses from 35-150mm to ensure that your Phase One P3 Payload gives you the best image quality and performance from a safe distance.

MAVLINK dji Auterion

The P3 offers:

- Most Versatile Platform Support – Your Business, Your Decision
- Unrivalled image quality
- Best in class sensor performance – Making the most out of every flight
- Largest image sensor – Capturing more in every shot
- Widest lens range – Getting the details from a distance
- Smart Focusing – Making every shot count
