

SimActive Releases Version 9.2 with Phase One (IIQ) Integration.

Montreal, Canada, June 21th, 2022 – SimActive Inc., a world-leading developer of photogrammetry software and Phase One, a pioneer of digital imaging sensors and airborne systems, today announced a strategic partnership. The new release of SimActive's Correlator3D Version 9.2. features several productivity enhancements, including the support of Phase One's Intelligent Image Quality (IIQ) format. Imagery can now be processed in Phase One's IIQ format, without going through an intermediate format. Working directly with the compressed files allows for much easier data management on large projects.

“Allowing our users to directly process imagery in our native IIQ format enables a faster and more seamless workflow.” Said Anthony Garetto, Chief Product Officer at Phase One. “We are thrilled that SimActive's development team was able to make this integration happen so quickly.”

“To facilitate the workflow of an overwhelming number of Phase One customers, our development team was able to rapidly implement this key differentiator into our software”, said Louis Simard, Chief Technology Officer at SimActive. “Phase One has become a leader in quality mapping sensors, and we are extremely happy to be a part of this collaboration.”

About Phase One

Phase One – a pioneer of digital imaging sensors and airborne systems for the Geo market and the largest provider of aerial cameras based on a long tradition for outstanding image quality and reliable sensors. Founded in 1993, Phase One is a pioneer of digital photography. Phase One has developed core imaging technologies and a range of digital cameras and imaging modules, providing the world's highest image quality in terms of resolution, dynamic range, color fidelity and geometric accuracy. As such, Phase One has grown to become the leading provider of high-end imaging technology across many demanding business segments, such as aerial mapping, industrial inspection and cultural heritage digitization, as well as serving the world's most demanding photographers. About SimActive

SimActive is the developer of Correlator3D™ software, a patented end-to-end photogrammetry solution for the generation of high-quality geospatial data from satellite and aerial imagery, including drones. Correlator3D™ performs aerial triangulation (AT) and produces dense digital surface models (DSM), digital terrain models (DTM), point clouds, orthomosaics, 3D models and vectorized 3D features. Powered by GPU technology and multi-core CPUs, Correlator3D™ ensures matchless processing speed to support rapid production of large datasets. SimActive has been selling Correlator3D™ to leading mapping firms and government organizations around the world, offering cutting-edge photogrammetry software backed by exceptional customer support.
